

### Labour Force Survey

#### Sharp decline in employment...

Alberta's economy lost 14,900 (seasonally adjusted) jobs in October, the largest monthly decline since March. These losses increased the unemployment rate to 7.5%, up from 7.1% in September. This is Alberta's highest unemployment rate since January 1996, but it remains the third lowest rate in Canada, after Saskatchewan (5.3%) and Manitoba (5.8%).

Nationally, 43,200 jobs were lost in October and the unemployment rate reached 8.6%, up from 8.4% in September.

### Average Hourly Wages

#### Alberta continues to lead the nation...

Alberta's average hourly wage rate grew by 0.4% in October to \$25.16 an hour. This represents an increase of 3.9% from October 2008 and continues to be the highest in Canada.

The national average hourly wage rate in October was \$22.35, which is up 3.3% from the same period last year.

### Building Permits

#### Value of permits continues to recover...

Alberta contractors took out building permits worth more than \$906 million (seasonally adjusted) in September, an increase of 9.8% from August. This was primarily driven by strong month-over-month growth in the institutional and governmental (58%) and commercial (43%) categories. While this was the third consecutive month of growth, the value of building permits in Alberta is still below the \$1.03

billion recorded a year earlier and the peak of \$1.82 billion in May 2007.

### Ivey Purchasing Managers Index

#### Index suggests expansion...

The Ivey Purchasing Managers Index was 61.2 in October, down slightly from the 61.7 logged in September. A value above 50 on the index, which measures Canadian purchasing manager's buying activity, implies expansion.

### US Economy

#### Unemployment rate reaches highest rate since April 1983...

Job losses continued in the US as employment fell by 190,000 in October with the largest job losses in the construction, manufacturing and retail trade sectors. This pushed the unemployment rate to 10.2%, the highest the rate has been since April 1983.

However, the rate of US job losses is slowing. Between August and October monthly job losses averaged 188,000, down from the 357,000 monthly average of the prior three month period and far less than the 645,000 average monthly job losses between November 2008 and April 2009.

#### Federal Reserve Bank stands pat with low rates...

The Federal Reserve Bank maintained interest rates at historically low levels and indicated that it is likely to maintain these rates for an extended period of time. While the Fed indicated that the recovery is likely to proceed very slowly, they also noted signs that economic activity has picked up.
